A handwritten diagram illustrating a neural network architecture for sentiment classification. The diagram is organized into a vertical sequence of layers, numbered 1 through 4 on the left side. A large oval encloses the first three layers: 1. tokenized, 2. doc2vec, and 3. NN layer. To the right of this oval, the text 'to keep word' is written, with 'word' circled. Below this, 'Subword' is written and underlined. Further down, 'token splitter' is written and underlined, followed by 'embed' and 'decode', both underlined. To the right of the 'NN layer' (layer 3), the text 'feature extraction' is written and underlined. Below this, 'pattern recognition' is written and underlined. The final layer, 4. on final, is at the bottom of the sequence.
